

# Expectation → Procedure Map Worksheet

Use this worksheet to turn a general classroom expectation into a clear, teachable routine. Choose one expectation (for example: entering the classroom, group work, asking for help, or transitions). Then describe exactly what students should do, what you will model, and how students will practice the routine.

Step 1: Name the expectation you want to teach:

---

Step 2: What should students do in the first 30 seconds?

---

Step 3: What should students do with materials?

---

Step 4: What should students do if something unexpected happens (late arrival, confusion, missing materials)? \_\_\_\_\_

Step 5: What should the room sound like during this routine?

---

Step 6: How will you model the routine for students?

---

Step 7: When and how will students practice this routine?

---

Step 8: How will you respond if the routine is not followed correctly the first time?

---

Step 9: Where will this expectation be visible for students after it is taught (poster, slide, anchor chart, checklist)? \_\_\_\_\_
